Abstract (en)

[origin: WO2014191132A1] The subject matter of the present invention is a method for producing multipacks (1) of containers (2). This involves first providing the containers (2) individually and optionally on their surface with at least one adhesive, thereby defining at least one spot of applied bonding or adhesive agent (3; 3', 3''). The containers (2) are subsequently formed into a group of containers and connected to one another at their respective spot of applied bonding or adhesive agent (3; 3', 3'') to form the respectively desired multipack (1). According to the invention, at least two differently formed adhesives and/or spots of applied bonding or adhesive agent (3; 3', 3'') are used to realize the respective multipack (1).
