Abstract (en)
[origin: WO2014191152A1] The invention relates to a transporting device (10) for transporting a bag section (210) between individual stations (170) of a bag-filling installation (100), having a first gripping device (20) for transporting from a bottom seam station (110) to a bottom seam cooling station (120), a second gripping device (30) for transporting from the bottom seam cooling station (120) to a filling station (130), and a third gripping device (40) for transporting from the filling station (130) to a top seam station (140), wherein an additional gripping device (50) is arranged for transporting the bag section (210) from the top seam station (140) to a top seam cooling station (150), wherein the gripping position (G50) in the top seam station (140) and the release position (L50) in the top seam cooling station (150) are arranged at the same height.
