Abstract (en)
[origin: WO2014194883A2] The invention relates to a tension lock for connecting a first component to a second component, in particular for connecting a cover which closes an opening to a container. The tension lock is characterised in that the tension lock has an inner adjusting mechanism for adjusting the tension applied, such that the tension lock offers good protection against contamination and can be cleaned particularly well. The tension lock is therefore particularly suitable for applications in the pharmaceutical industry or food industry.
