Abstract (en)
[origin: WO2014193317A1] The present invention relates to the field of ISO containers that are adjustable lengthwise, and more specifically to an optimised use of such adjustable ISO containers. This invention, and the claims related to same, were the subject of a patent application filed in France in late May 2013 by the same applicant and inventor, Mr. Mohamed Sahbi Miled. Figure 1 illustrates a three-dimensional view of the solution, an example of an ISO container according to the present invention in the elongated configuration of same. In particular, figure 1 illustrates a fixed central portion (1) corresponding to an ISO container of size A, which is equivalent to a length L0 of twenty (20) feet; a left-hand movable portion (2a) of size $((B-A)/2)$, which is equivalent to a length L2 of ten (10) feet; and a right-hand movable portion (2b) of size $((B-A)/2)$, which is equivalent to a length L1 of ten (10) feet.
