Abstract (en)
[origin: WO2014195493A1] The present invention relates to a method for synthesizing a nitrile/fatty ester aldehyde, including the following steps:
1) hydroformylating a nitrile/ester/ ω unsaturated fatty acid substrate under specific partial pressure, temperature, reaction time, nitrile/ester/ ω unsaturated fatty acid reactant conversion rate, catalyst, [substrate]/[metal] molar ratio, and [ligand]/[metal] molar ratio conditions, such as to obtain, from the reaction: a hydroformylation product including at least one nitrile/ester/fatty acid aldehyde of formula: $\text{OHC}-(\text{CH}_2)_{r+2}-\text{R}$, and an isomerate including at least one nitrile/ester/internally unsaturated fatty acid isomer, wherein at least 80% of the internal isomer(s) of the isomerate consist of the unsaturated $\omega-1$ isomer of formula $\text{CH}_3-\text{CH}=\text{CH}-(\text{CH}_2)_{r-1}-\text{R}$; then 2) separating and recovering the nitrile/ester/ fatty acid aldehyde and the isomerate.
