Abstract (en)
[origin: WO2014195260A1] The invention relates to a device for separating needles (1), said device comprising a receiving element (2) for the needles (1) and a separating device (3). Said receiving element (2) comprises at least one through opening (4), the separating device (3) comprises an ejection device (5) which can be passed through the through-opening (4) of the receiving element (2). Said ejection device (5) has a contact area (6) on the upper edge which corresponds at least to a needle (1) and detects said needle.
