Abstract (en)

[origin: WO2014195184A1] The invention relates to a device for coating and/or impregnating a textile material web (1), comprising an application unit (2) for finishing agents, wherein the application unit (2) has at least two application rollers (5, 6), which are supported in a machine frame (4), and comprising a heat-treatment apparatus (3). The problem addressed by the invention is that of the device being suitable for different application types. This problem is solved in that a lower application roller of the application rollers (5) is supported in the machine frame (4) in such a way that the lower application roller can be moved vertically or at an angle.
