Abstract (en)

[origin: WO2014191000A1] The invention concerns a building system comprising at least one profile having a bottom and two side walls defining an opening in the profile, and at least one bracket attachable to said profile, wherein the side walls and bottom of the profile form a dovetailed profile opening where the profile side walls hereby form an angle of less than 90° with the profile bottom, and wherein the bracket comprises flexible side engagement members that are adapted to be biased against the side walls of the profile for mounting the bracket therein.
