Abstract (en)
[origin: WO2014191959A1] A system for constructing a superstructure comprising: -a first supporting head (2) which permits the temporary support of a superstructure during the phase of construction; -a first and a second panel (3,4), which in a first configuration are adjacent and in contact with each other and contribute to defining a bottom of formwork intended to receive poured concrete for constructing the superstructure; -a first supporting beam (5) for the first panel (3), said first supporting beam (5) resting upon a raisable/lowerable portion of said first head (2); -a plug (6) placed on an upper end of the first head (2), said plug (6) blocking off a space (60) interposed between the first and second panels (3,4) and contributing to delimiting the bottom of the formwork.
