Abstract (en)  
[origin: US2016096043A1] A belt of roping harness including flexible support strip designed to support dorsal part of user's body, adjustment device of the circumference of belt having first and second ends fixed to support strip in first and second positions, and at least three resistance threads each stitched onto adjustment device in specific third and fourth positions. At least one of the resistance threads presents longer length than the distance separating the third and fourth positions along the support strip. The belt also includes securing means of the resistance threads configured so as to secure the resistance threads with the support strip in manner separated from one another in orthogonal direction to longitudinal axis of the support strip. Also relates to a pair of leg loops including similar features. Finally it relates to roping harness including belt and/or pair of leg loops provided with the above-mentioned features.
