Abstract (en)
An exerciser device without rebound comprises a ball means (2) having a coating means (3) of spherical shape. The device comprises at least one vent means (5) applied to the coating means (3), said at least one vent means (5) put the inside of the coating means (3) in flow communication with the outside. In a crash or impact condition of the ball means (2) against an object, person or other element, the at least one vent means (5) is assigned to allow an air flow from the inside of the coating means (3) toward the outside to dissipate an amount of energy generated by said crash or impact reducing or eliminating the rebound of the device.
