Abstract (en)

[origin: EP3006624A1] A control lever assembly and methods of forming and using a control lever assembly of a compaction roller are disclosed. The control lever assembly includes a lever that is defined by a body having a first end connectable to a control arm of a compaction roller. The body forms a first grip site (88) and a second grip site (90) that are each offset from the first end of the body. The first grip site (88) and the second grip site (90) are laterally offset from a longitudinal center-line axis of the control arm and spaced from one another so that each of the first grip site (88) and the second grip site (90) are beyond the reach of a hand engaged with the other of the first grip site and the second grip site.
