Abstract (en)
[origin: CA2908288A1] The technique described relates to an actuator (A for creating an electrical contact between two tracks of a printed circuit board. According to this technique, such an actuator comprises: - a polymer part (PSM), forming an arm comprising one contact end (E1) and one end for setting in motion; - a metal part (PM), fixedly attached to the contact end (E1), having a general shape of a cap.
