Abstract (en)

[origin: EP3007393A1] A method and system for processing RSVP-TE signaling, including: extending an object using unnumbered resources within an RSVP-TE signaling, representing link resources in the signaling with a triple consisted of an area ID, a router ID and an interface; when configuring network resources, configuring each area ID to be different, while an intra-area router ID to be unique; representing resources in a signaling message with the triple when applying cross-area services.
