Abstract (en)

[origin: WO2014199079A1] The invention concerns a device (2, 122) removably attaching an element (4) to an item comprising: -a support member provided to support the element (4), likely to be rotated about an axis (10, 100); -a locking member comprising a core that extends axially and a head (26, 126) that extends transversely at a distal end of the core; and -coupling means that couple the support member (8, 108) to the locking member (22, 122) to move the locking member (22, 122), during a rotation of the support member (8, 108), between an unlocked position, a first intermediate position, a second intermediate position and a locked position.
