Abstract (en)

[origin: WO2014198819A1] The invention relates to a drawer with lateral frames (1) and a front panel (5) which can be adjusted laterally and/or vertically and which is connected to at least one lateral frame (1) via at least one support element (20) that is guided into the lateral frame (1) in a movable manner in the longitudinal direction of the lateral frame (1). The support element (20) interacts with a clamping device (10) arranged in the lateral frame (1), whereby the front panel (5) can be pulled in order to fix the front panel against a head end (2) of the lateral frame (1), and the front panel (5) can be moved laterally and/or vertically relative to the lateral frame (1) in an adjusting position of the clamping device (10). The drawer is characterized in that the front panel (5) is at a distance from the lateral frame (1) in the adjusting position, and the front panel (5) can be adjusted by applying pressure onto the front panel (5) in the direction of the lateral frame (1). The invention further relates to a furniture fitting for such a drawer and to a method for adjusting the front panel of a drawer.
