Abstract (en)  
[origin: WO2014199216A1] The present invention describes a double wiper cleansing head (100) for a machine for cleaning surfaces, comprising a central suction port (102) integral with two peripheral suction channels (103,104), a front channel and a rear channel, with respect to a driving direction and with respect to a brush, centrally located between said suction channels. The channels converge each in a front and rear wiper (112,112') respectively, and said wiper comprise inner and outer blades (107,107') on the corresponding sides of the suction channels. Said blades are adapted to collect and convey the cleaning fluid and the residues of dirt inside said suction channels, and moreover said wipers comprise means (115,115') for partialize the air flux in said suction channels.
