Abstract (en)

[origin: WO2014198579A1] A protective device for protecting persons from travelling rail vehicles in a railway station area comprises an inner and an outer protective wall (11, 12, 76, 77, 88, 89). The railway station area contains at least one platform (4), wherein the platform (4) has at least one platform edge (2, 22), and tracks for a rail vehicle are arranged on a first side of the platform edge (2, 22), and a platform surface (23) extends from the second side of the platform edge (2, 22). The railway surface is embodied as a waiting area for persons. The protective wall (11, 12, 76, 77, 88, 89) is located at or in the vicinity of the platform edge (2, 22) and can be adjusted between a retracted state and an extended state in such a way that in the extended state of the protective wall (11, 12, 76, 77, 88, 89) access to the tracks is prevented, and in the retracted state the access to the tracks is permitted.
