Abstract (en)

[origin: WO2014199049A1] A pivoting assembly mounted on a motor vehicle gearbox for shifting and selecting gears. The assembly is mounted pivotally by means of a shaft (A) on a motor vehicle gearbox for shifting and selecting gears, said assembly being mounted pivotally on the gearbox and comprising two angled levers or arms (1) and (2) having, at each free end, arrangements (3) for coupling cables or bars secured to a control lever mounted in the passenger compartment of the vehicle. According to the invention, said assembly comprises, in combination, at least one weight (4) and at least one element (5), capable of dampening and filtering vibrations, said element (5) being positioned between the coupling arrangements (3) and the pivot shaft (A).
