Abstract (en)

[origin: WO2014199104A1] The invention relates to a method for controlling the power supply of a system for supplying hot water including at least one water tank, each water tank including an electric heating unit for heating the water, a first time slot and a second time slot being predefined, the heating unit being active during the first time slot. The method includes the following steps: receiving an order to cut the power supply of the system comprising a cutting time; conditionally cutting the power supply of the heating unit depending on the position in time of the cutting time relative to the first and second time slots.
