Abstract (en)

[origin: WO2014200489A2] A computer-implemented method for training a user in a procedure includes registering a profile of the user, and receiving a selection of a training aid from a menu using a graphical user interface of the computer. The method further includes displaying the training aid on the graphical user interface of the computer. The training aid is responsive to an input from the user. The training aid accesses a storage space of the computer including a first database storing a graphical representation associated with the procedure, and a second database storing a multitude of questions and a multitude of associated answers. The storage space further includes a third database storing a multitude of symptoms and a multitude of associated solutions, and a fourth database storing a multitude of sequences associated with the procedure.
