Abstract (en)  
[origin: US2016108562A1] This heddle for guiding a warp yarn for a loom extends lengthwise along a longitudinal axis (X1) and comprises a heddle body including at least one strand. This heddle also comprises an eye (2) including a central portion including at least one eyelet for passage of a warp yarn and at least one longitudinal tab. This longitudinal tab extends the central portion and the eye defines a main plane (P). The longitudinal tab of the eye comprises at least one cambered part (242, 244) that is deviated in an inclined manner relative to the main plane by deviating the eye over its entire thickness, and which extends over the entire width of the longitudinal tab measured along a lateral axis parallel to the main plane and perpendicular to the longitudinal axis.
