Abstract (en)
[origin: KR20160043920A] The present invention relates to a warp thread knitting needle (1) having a range in the longitudinal direction and a needle stand (2). The needle stand (2) includes: an operating region (4) arranged on one side of the longitudinal direction; a needle foot (5) arranged on the other side of the longitudinal direction; and a mount unit (6) arranged between the operating region (4) and the needle foot (5). The mounting unit (6) includes a bearing surface (7) extended to the range in the longitudinal direction (3) and an upper surface (10) arranged at the side of the needle stand (2) facing a direction estranging from the bearing surface (7). The needle foot (5) forms a retaining surface (8). Additionally, provided is a needlebar matching the warp threat knitting needle. In the present invention, a warp threat knitting machine can operate with a high speed of operation. Also, the retaining surface (8) is formed at a distance (9) extended from the bearing surface (7) towards the upper surface (10).
