Abstract (en)
The invention concerns a module (1) comprising a floor and at least one wall arranged to provide the module with a wet area interior. The at least one wall comprises a prefabricated one-piece wall element (11) which constitutes the planned outlay and size of the wall, wherein the wall element is constituted by a glass fiber reinforced board with an integrated layer of tiles positioned so that the layer of tiles faces the wet area interior (20). The floor comprises a prefabricated one-piece floor element which constitutes the planned outlay and size of the floor, wherein the floor element is constituted by a plate structure (3) and a glass fiber reinforced board with an integrated layer of tiles (6), wherein the plate structure is made of polystyrene and is configured with an inclined surface (4) sloping towards a drain (5), wherein the inclined surface faces the wet area interior and the glass fiber reinforced board with the integrated layer of tiles is positioned on plate structure with the layer of tiles facing the wet area interior. The invention also comprises a method for manufacturing a module provided with a wet area interior.
