Abstract (en)  
[origin: WO2014204301A1] A self-standing tobacco pouch formed from a pliable sheet material, said tobacco pouch comprising; a bottom part forming a support foot to stand on a surface, a pouch wall extending from the bottom part to an entrance defined by an entrance rim, a curved or angled elongate shaping member, which is provided near or at a first rim part of the entrance rim to hold the first rim part in a curved or angled configuration, wherein the shaping member has a bending stiffness which is larger than the bending stiffness of the sheet material, the entrance rim comprises a second rim part located opposite to the first rim part, the second rim part is positionable in a first position wherein the second rim part is located at a distance from the first rim part to form an opened entrance and in a second position wherein the second rim part is located in contact with the first rim part to form a closed entrance.
