Abstract (en)  
[origin: WO2014204306A1] The invention relates to a device for providing a living space, which device comprises a first element and a second element, which two elements are mutually connectable and in connected state define a substantially L-shaped form, wherein the device can be mounted releasably on a vehicle such that at least a part of the vehicle extends in a space defined by the elements connected in L-shape, wherein, in the situation where the device is uncoupled from the vehicle, the defined space is suitable as living space, wherein the first element is configured to form a wall of the living space and the second element is configured to form a roof of the living space.
