Abstract (en)

[origin: WO2014202575A1] The invention relates to an apparatus for producing packages, wherein a base is placed thereunder, and for example wherein a folding station folds protruding edges towards the package. It is proposed that at least the folding station or the base-delivery apparatus is in the form of a linear conveyor with a closed moving track on which carriages circulate in the same direction, with at least one folding head on each carriage.
