Abstract (en)

[origin: WO2014203122A1] A refillable dispenser includes a flexible pouch having a top and a bottom spaced apart in a width dimension. The bottom terminates at a bottom edge. The pouch has a front wall, a back wall, and an interior space therebetween. The dispenser includes a dispensing opening formed in the front wall. The dispensing opening has a width that extends in the width dimension, and the dispensing opening defines a midpoint along its width. The dispenser includes a seam that extends generally in a length dimension and that is disposed generally at the pouch top. The seam can be opened to an open position and resealed to a closed position to connect the front wall to the back wall. The seam defines a seam inner edge and a seam outer edge. The midpoint of the dispensing opening is disposed closer to the bottom edge than to the seam inner edge.
