Abstract (en)

[origin: WO2014202662A1] The invention relates to a container for transporting fresh foods, in particular fish, consisting of a floor part and side walls rising up from said floor part, wherein the top edge of the side walls is formed to the outside and wherein there is an insert in the interior of the container for receiving the product to be transported and the container can be closed by means of a lid, wherein the contact surface of the insert is designed to be cambered and the curvature of the cambering is directed to the container opening and the cambered part of the insert is enclosed by a recessed channel having openings arranged therein, and an edge region (14) directed laterally upward extends from the channel (12), the outer edge of which contacts the inner side of the side walls of the container, and the insert is enclosed by a circumferential, apron-like wall which is directed downward.
