Abstract (en)

[origin: WO2014203160A1] A thread dispensing element (60) for a thread guide (6) for knitting machines, comprising a body (62) having a mounting portion (63), destined to be removably mounted to a front end (8) of a thread guide (6), and an operating portion (64), destined to be facing towards the needles (N) of a needle-bearing organ of a knitting machine. The mounting portion (63) enables mounting the dispensing element to the thread guide according to a determined discrete number of configurations with respect to the thread guide (6), to which corresponds a same discrete number of positions assumed by the operating portion (64) of the dispensing element with respect to the needles (N) of the needle-bearing organ. The dispensing organ (60) is configured so as to be selectively mountable to the thread guide (6) exclusively in a configuration selected from among the determined discrete number of configurations.
