Abstract (en)
[origin: WO2014202478A1] The projectile (100) is based primarily on a secondary unit (2) integrated into a support shell (1) in order to produce a flash, explosive, smoke, or fog effect or combinations thereof. The secondary unit is discharged in the target region by means of a head detonator (2) in a selectable or presettable manner via a discharge system or ignition system and subsequently triggered by means of a delay system (6), or the secondary unit is triggered while still in the support shell (1) without a delay for the purpose of a desired influence on the effect.
