Abstract (en)

[origin: WO2014202752A1] The invention relates to a device and a method for the non-destructive testing of a component of a rolling bearing (2), said bearing comprising a plurality of rolling elements (6). According to the invention, the component is laterally accessible in the assembled state of the rolling bearing (2) in an area (10) located between two adjacent rolling elements (6) and the device comprises a testing device (14) which can be guided laterally into the rolling bearing (2) and seated against the component, said testing device comprising at least one sensor (16) for testing the component.
