Abstract (en)

[origin: WO2014202264A1] An information system has a component memory (100) for storing component data records (110, 120, 130, 140, 150, 160, 170, 180); a component linking apparatus (105) in order to create component links (191 – 197) in one component linking memory (111, 121, 131, 141, 151, 161, 171, 181); a document memory (200) for storing document data records (210, 220, 230); a document linking apparatus (205) in order to link entries for components for which there is a component data record (110, 120, 130, 140, 150, 160, 170, 180) in the component memory (100) to the corresponding component data record (110, 120, 130, 140, 150, 160, 170, 180); and a document access apparatus (300) having a document selection apparatus (320) and an evaluation apparatus (330) that is designed to identify first component data records (110, 180) linked to a first document data record (210, 230); to identify second component data records (130, 140, 150, 170) linked to the identified first component data records (110, 180); and to identify second document data records (220) linked to the identified second component data records (130, 140, 150, 170).
