Abstract (en)  
[origin: US2016113361A1] The invention relates to a bracelet clasp including three strips, and a cover hinged to one of the strips. The clasp is provided with first and second push-pieces and with a safety device preventing lateral movement of the cover causing the clasp to unlock when pressure is simultaneously exerted both on a push-piece and on a flap of the cover opposite said push-piece. According to the invention, the safety device includes a spacer being received between the cover flaps, the ends of the spacer abutting against the cover flaps so as to prevent lateral movement of the cover causing the clasp to unlock when pressure is simultaneously exerted both on a push-piece and on a flap of the cover opposite the push-piece.
