Abstract (en)

[origin: EP2649977A1] An electronic skin treatment device with an integrated treatment material dispenser is disclosed, with which skin treatment material may be applied to a target skin area concurrently with a skin treatment applied by a treatment surface of a skin treatment element of the device. The skin treatment element may comprise means to deliver ultrasonic vibrations, mechanical massaging motions, galvanic stimulations, or light illumination. The skin treatment material is applied directly to the skin treatment surface of the device via an outlet opening in the skin treatment surface. Control means within the device may control the operation of the skin treatment element and the dispensing of skin treatment material during operation of the device.
