Abstract (en)

Examples of the present disclosure relate to an apparatus for providing a multilayer barrier coating and method for forming the same. The apparatus may comprise: at least a first layer and a third layer formed via a first process; and at least a second layer, between the first and third layers, formed via a second process different to the first process; wherein the first process is a Sol-Gel process. The apparatus may be used to encapsulate an object (not least for example an organic light-emitting display or photovoltaic cell) to provide barrier protection.
