Abstract (en)

[origin: CN105526626A] The invention relates to a structure unit for compact heating equipment. The compact heating equipment is provided with two heating circuits that can be loaded by one circulation pump. The structure unit has a switching valve for connecting one and/or the other heating circuit to the supply circuit of a circulating pump. The switching valve comprises a pivoting lever, a shut-off member is arranged on one end of the pivoting lever, and a driver (19) is arranged on the other end (8) of the pivoting lever. In the structural unit, the driver can be placed in a work position and an installation position, when the driver is in the work position, the structure unit works normally, and when the driver is in the installation position, the driver (19) can be installed in the structure unit or be disassembled from the structure unit.
