Abstract (en)
[origin: WO2014206486A1] The invention relates to a movable ride-on floor cleaning machine having a front end and a rear end relative to a forward travel direction, comprising a chassis, a suction blower apparatus, which is arranged on the chassis, at least one suction bar, which is in fluidic connection to the suction blower apparatus and which is arranged on or in the proximity of the rear end or the front end, a holder for the at least one suction bar, via which the at least one suction bar is held on the chassis, a swivel bearing via which the at least one suction bar can be swiveled relative to the chassis with a swivel axis transverse to a placement surface of the floor cleaning machine, a first reset apparatus, which causes a reset of the at least one suction bar from a swivel deflection position to a swivel home position, a slide bearing, via which the at least one suction bar can slide relative to the chassis, and a second reset apparatus, which causes a reset of the at least one suction bar from a slide position to a slide home position.
