Abstract (en)  
[origin: WO2014207259A2] The present invention relates to a two-phase composition for topical application, comprising an aqueous phase and an oily phase which are separate, and magnesium acetate, the weight ratio between the aqueous phase and the oily phase preferably ranging from 10/90 to 90/10. The presence of magnesium acetate makes it possible to obtain good phase separation of the two phases after shaking, and to avoid the formation of foam in the oily phase during shaking. The invention also relates to use of this composition in the cosmetic field, especially for removing makeup from, cleansing and/or caring for the skin, the lips and/or the eyes, or for haircare.
