Abstract (en)
[origin: WO2014207116A1] The invention relates to a component (100) for fitting to a safety harness (102) for a human user (104), for at least partially preventing obstruction of the femoral vein (106) of the user (104), said component (100) comprising: a support structure (108); two leg harness pads (110) fitted to the support structure (108) at such a distance from one another that, when the component (100) is fitted to the safety harness (102), a section (112) of the support structure (108) arranged between the two leg harness pads (110), in particular a section without a leg harness pad, at least partially prevents obstruction of the femoral vein (106) of the user (104), if the user (104) has put on the safety harness (102); and a detachable fastening mechanism (114), that is fitted or can be fitted to the support structure (108), for detachably fastening the component (100) to the safety harness (102).
