Abstract (en)  
[origin: WO2014207729A2] Crystallizer for continuous casting comprising a tubular body (11) having at least one wall (12) which defines a through longitudinal casting cavity (13) and a plurality of longitudinal grooves (14) made at least on one part of the wall (12) and open toward the outside thereof. A covering binding (15) is associated to the external surface of the wall (12) to close the longitudinal grooves (14) and thus obtain corresponding cooling channels (17) configured to make a cooling liquid flow inside them.
