Abstract (en)
[origin: WO2014207659A1] A security element designed to reveal at least two separate messages depending on at least two different observation conditions and a document incorporating such a security element. The invention concerns a security element designed to reveal at least two separate messages (M l, M2) depending on at least two different observation conditions, characterised in that it comprises a stack of at least: - a first at least partially translucent sheet (2'), - and a last sheet (4',20), and: - on the front face of the first sheet (2'), at least one first message (M l) formed by at least one pattern layer (5), - between the first sheet (2') and the last sheet (4', 20), at least one second message (M2) formed by at least one pattern layer (7, 21), - between the front (R) of the first sheet, inclusive, and the back, inclusive, of the last sheet (4',20), at least one first at least partially semi-reflective layer (2"), the first message being visible in first observation conditions and the second message being visible in second observation conditions different from the first observation conditions. The invention also concerns a security document incorporating such a security element.
