Abstract (en)  
[origin: WO2014206734A1] The invention relates to a diffuser (1) for distributing a product contained in a container, said diffuser being provided with - a base (10) to fasten it on a container; - a push-button (20) provided with a channel (23) emerging both on means (22) for cooperating with a distribution device of a container and on an outlet opening (24) via which the product contained in a container can exit. The diffuser according to the invention is also provided with - a cap (30) connected to the base by a hinge (17, 17') such that it can be moved between a closed position, in which it is folded down on the base while isolating the push-button (20) and the outlet opening (24) from the outside, and an open position, in which it is upright, providing access to the push-button and freeing the outlet opening, - tamper-evident means (40, 18) that must be partially torn away upon the first use to make it possible to move the cap from the closed position to the open position, the tamper-evident means being made up of both a strip (40) and a shoulder (18), one being fastened to the cap (30) and the other to the base (10), the strip being fastened to the cap or the base by connecting means (41', 41'') that can be torn by hand easily, and the shoulder being placed on the base or the cap such that, when the cap is placed in the closed position, the shoulder is snapped behind a stop (43) formed in the strip without being able to free itself except by tearing away the strip.
