Abstract (en)  
[origin: WO2015082647A2] The invention relates to a delivery for a sheet-processing machine having a sheet brake (5) having at least one adjustable brake element, wherein a control apparatus provides an adjustment for the brake element in dependence on at least one piece of information for covering a sheet (1) with a medium, to a method for adjusting at least one brake element of a sheet brake, and to a use of an unprinted section of a print stock for delaying the print stock. The problem addressed by the invention is the further improving of the braking process of sheets in the delivery of a sheet processing machine. This problem is solved according to the invention in that the adjustment for the brake element comprises the use of a region which is at least partially covered by a medium and extends in a sheet travel direction (STD) from the sheet front edge to the sheet rear edge over a sub-region of the sheet width.
