Abstract (en)
[origin: WO2014206786A1] The invention relates to a condensate collecting tank arrangement 1 for a drying apparatus, having a collecting tank 2 for receiving condensate 4 which is separated out in a drying process, the collecting tank having an inlet opening 5 and having an outlet opening 6 for the condensate 4 and having a filter 20 which removes contaminants 24 from the condensate 8 before the condensate 8 passes to a self-cleaning means 14. To further optimize the efficiency of the condensate cleaning action and the service life of the filter, there is provision for the filter 20 to be arranged in the flow path 9 of the condensate 8 between the outflow opening 6 and the self-cleaning means 14.
