Abstract (en)
[origin: WO2014207295A1] The application relates to a method for producing peat and a method for working a peat bog. In an embodiment according to a method for producing peat, peat is moved from shallow peat areas to production fields (3) in such a way that a peat layer is provided on them. Bog vegetation from the location of the moved peat layer is returned to its location, and the deep parts of the bog are dried by means of drainage ditches (5). The bog area (1) is prepared by peat moving in such a way that the shallow fringe areas form a peat-free, mainly vegetation-covered protective zone (2) around the peat production site.
