Abstract (en)
[origin: WO2014206845A1] The invention relates to a glow plug for an internal combustion engine, comprising a housing (1) in which a connecting bolt (4) is arranged, and comprising a ceramic heating rod (2), said ceramic heating rod (2) having a first electrical contact point (6) and a second electrical contact point (7). The first electrical contact point (6) of the heating rod (2) is at least indirectly connected to the housing (1) of the glow plug. The second electrical contact point (7) is electrically connected to the connecting bolt (4) by means of a contact element (8). The second electrical contact point (7) is arranged on a circumferential surface of a section (5) of the ceramic heating rod (2) on a connecting side. The contact element (8) has a section allowing an axially moveable electrical contact with the second contact point (7), on the circumferential surface of the connecting-side section (5).
