Abstract (en)  
[origin: WO2014206815A1] The invention relates to a domestic refrigerator (1) having an interior (4, 5) which is intended for accommodating foods and is bounded by walls of an inner container (3), and having a keep-fresh container (8) for food, said container being arranged in the interior (4, 5) and being closable by a cover (9), and having a mounting device (12), by means of which the cover (9) is mounted such that it can be raised and lowered for opening and closing the keep-fresh container (8) in the interior (4, 5), and having an operating element (13), by means of which the cover (9) can be actuated, wherein the operating element (13), for actuating the cover (9), can be rotated, about an axis (A), over an actuating path and can be latched at least in one rotary position along the actuating path.
