Abstract (en)

[origin: WO2014206811A1] The invention relates to a domestic refrigerator (1) having an interior (4, 5) which is intended for accommodating foods and is bounded by walls of an inner container (3), and having a keep-fresh container (8) for food, said container being arranged in the interior (4, 5) and being closable by a cover (9), and having a mounting device (14), by means of which the cover (9) is mounted such that it can be raised and lowered for opening and closing the keep-fresh container (8) in the interior (4, 5), and having an operating element (12), by means of which the cover (9) can be actuated, wherein a front strip (11) has a movement-guiding device (22) for the operating element (12), and the movement-guiding device (22) has a carrier plate (20) with lateral guide elements (24, 25), wherein the operating element (12) has a displacement slide (23), which is guided in a displaceable manner in the carrier plate (20).
