Abstract (en)  
[origin: WO2014206612A1] A device for measuring vehicles has at least one image-recording device which has at least one camera (2) with at least one light incidence region (6) which is embodied in such a way that light from an object which is to be received from the camera (2) enters the camera (2) through the at least one light incidence region (6). The device also has a device for keeping clean and/or cleaning the light incidence region (6), which device has at least one deflection element (8, 80) which can be moved over the light incidence region (6) in such a way that it prevents deposits of dust and dirt on the light incidence region (6), and/or removes dust and/or dirt from the at least one light incidence region (6).
